1. Company Overview

Barindra International is a leading human hair processing and manufacturing company based in Bangladesh. The company specializes in procuring raw human hair from various countries, processing it through multiple stages, and exporting the final products to international markets.

The company operates a unique business model combining home-based workers with factory-based processing to achieve scale and efficiency. With over 5,000 workers and a sophisticated supply chain, Barindra International has established itself as Bangladesh's first formal exporter in the human hair industry.

Key Company Information

Company Name	Barindra International
Business Type	Human Hair Processing & Export
Head Office	Uttara, Dhaka (Sector 6)
Factory Location	Dinajpur
Total Workers	~5,000+ (Home-based + Factory)
Field Supervisors	~50 Line Leaders
Export Markets	China, USA, Europe, Africa, and more
Source Countries	India, Uzbekistan, Tajikistan, Pakistan, Myanmar, China, Nepal, Vietnam, Malaysia
Processing Stages	3 Major Phases
Current System	Manual (Excel + Hard Copy)

Organizational Hierarchy

Level	Role	Count	Responsibility
1	Managing Director	1	Overall business strategy and decision making
2	Production Manager	3	Oversee all production operations
3	Group Head (Head Leader)	5	Manage Line Leaders, coordinate with PM
4	Line Leader	~50	Field supervision, material distribution
5	Supervisor	~500	Home-based worker management

Level	Role	Count	Responsibility
6	Worker	~5,000	Production work (weft making, etc.)

2. Raw Material Procurement Process

The procurement process is the foundation of the entire business operation. Raw human hair is sourced both internationally and locally. The procurement team maintains relationships with suppliers across multiple countries to ensure consistent supply of quality raw materials.

2.1 Import Procurement

Raw human hair is imported from multiple countries including India, Uzbekistan, Tajikistan, Pakistan, Myanmar, China, Nepal, Vietnam, and Malaysia. The import process involves:

- 1. Supplier Selection & Negotiation:** Identify and negotiate with suppliers in source countries. Price varies significantly based on hair quality, length, and origin.
- 2. Letter of Credit (LC) Issuance:** Commercial bank issues LC for international purchases. LC management tracks from opening to clearance.
- 3. Shipping & Customs Clearance:** Goods shipped to Bangladesh and cleared through customs at ports.
- 4. Transport to Dhaka Warehouse:** Cleared goods transported to main warehouse in Dhaka for sorting and grading.

2.2 Local Procurement

In addition to imports, raw hair is also purchased locally from various regions within Bangladesh. Local procurement involves direct purchase from collectors and intermediaries. Prices vary by location (e.g., Narayanganj, Gazipur, and other areas have different rates for similar quality).

- Local suppliers bring raw hair to the Dhaka office
- Quality assessment performed on-site before purchase
- Immediate cash payment or credit arrangement
- Goods直接进入 sorting process without customs clearance

3. Raw Material Receiving & Inventory

All incoming raw materials (both imported and locally purchased) are received at the Dhaka warehouse. This stage is critical as it establishes the foundation for all subsequent tracking and costing.

Receiving Process Steps

- 1. Physical Receipt:** Goods are physically received and counted at the warehouse.
- 2. Weight Recording:** Initial weight is recorded (e.g., 500 kg per batch).
- 3. Quality Inspection:** Initial quality check to verify it matches purchase order specifications.
- 4. Inventory Entry:** Goods are entered into stock as 'Raw Material Stock' with purchase value.
- 5. Lot/Batch Number Assignment:** A unique lot number is assigned for tracking purposes.

Inventory Management

Stock Type	Raw Material Stock (Pre-Processing)
Location	Dhaka Main Warehouse
Tracking	Lot/Batch Number based
Unit	Kilograms (kg)
Average Batch	200-500 kg per lot
Valuation	Purchase cost + freight + duties

4. Sorting, Grading & Lot Assignment

The sorting and grading process is one of the most critical stages in the entire operation. Experienced workers in Dhaka sort the raw hair by color and quality before assigning lot numbers. This process requires significant expertise as the quality assessment directly impacts pricing and processing decisions.

Sorting Process

- 1. Color Separation:** Hair is separated by natural color categories (black, brown, blonde, etc.).
- 2. Quality Assessment:** Each batch is assessed for texture, strength, length consistency, and overall quality.

3. Length Evaluation: Initial length evaluation performed (affects pricing significantly).

4. Grading: Hair graded into quality categories that determine processing path.

Lot Assignment

After sorting, a unique Lot Number is assigned to each batch. This lot number becomes the primary tracking identifier throughout the entire production process, from raw material to finished goods export.

Lot Identifier	Unique Lot Number
Attributes Tracked	Color, Quality Grade, Weight, Source, Date
Tracking Scope	From raw material to export
Multiple Lots	Supervisors may handle multiple lots simultaneously

5. Material Transfer: Dhaka to Dinajpur

After sorting and lot assignment in Dhaka, materials are transferred to the Dinajpur factory for processing. This transfer process must be carefully tracked to maintain inventory accuracy.

Transfer Process

- 1. Requisition:** Production Manager or Group Head creates a requisition for materials needed at Dinajpur.
- 2. Material Booking:** Requested materials are booked against specific lot numbers in the system.
- 3. Dispatch from Dhaka:** Materials physically dispatched with proper documentation (delivery slip).
- 4. Transport:** Goods transported via road to Dinajpur factory.
- 5. Receipt at Dinajpur:** Materials received and verified against requisition at factory.
- 6. Stock Update:** Dhaka stock reduced, Dinajpur stock increased accordingly.

Tracking Points

- Booking status: booked vs. physically dispatched
- In-transit tracking
- Receipt confirmation and variance check

6. Washing & Pre-Processing

Upon receipt at the Dinajpur factory, raw hair undergoes the first major processing phase — washing and pre-treatment. This stage transforms the raw, unprocessed hair into clean, sanitized material ready for production.

Washing Process Steps

- 1. Initial Sorting:** Received lots are organized by the floor manager.
- 2. Washing:** Hair is washed using specialized shampoo and chemicals in the washing plant.
- 3. Chemical Treatment:** Specific chemicals applied based on hair type and desired output.
- 4. Drying:** Hair is dried using industrial drying equipment.
- 5. Re-stocking:** Cleaned hair is weighed and restocked as 'Washed Material' (weight may vary $\pm 2\text{kg}$).

Personnel Involved

Floor Manager	Oversees washing operations
Washing Plant Workers	~7-8 workers operate washing equipment
QC (Initial)	Checks wash quality before handover to production

7. Phase 1 Production: Home-Based Workers

Phase 1 Production is the core manufacturing activity involving approximately 5,000 home-based workers. This unique distributed manufacturing model allows the company to achieve massive scale while keeping overhead costs low. The production is managed through a hierarchical supervisor system.

7.1 Worker Hierarchy

Role	Count	Details
Production Manager	1-3	Plans production, assigns targets to Group Heads
Group Head	5	Each manages ~10 Line Leaders, 200-300kg allocation
Line Leader	~50	Each manages ~10 Supervisors, travels by motorcycle, 30kg allocation

Role	Count	Details
Supervisor	~500	Each manages 15-20 workers, works from home
Worker	~5,000	Home-based, receives 100-300g per task

7.2 Material Distribution Flow

1. Production Manager (PM): Receives washed material and plans production distribution. Assigns targets to Group Heads.

2. Group Head (Head Leader): Receives 200-300 kg allocation. Divides among 8-10 Line Leaders. Records lot numbers and quantities distributed.

3. Line Leader (Field Supervisor): Receives 30 kg allocation. Travels by motorcycle to factory areas. Distributes to 10 Supervisors (each getting 3 kg).

4. Supervisor (Home-Based): Receives material for 15-20 workers. Organizes workers at her home or nearby location. Distributes 100-300g per worker based on capacity.

5. Worker (Home-Based): Performs production tasks (weft making, alignment, etc.) at supervisor's location or nearby homes.

Daily Production Cycle

- Morning: Line Leaders collect material from Group Head
- Day: Workers process material at their locations
- Evening: Workers return completed work to Supervisor
- Evening: Supervisor returns all packets to Line Leader
- Evening: Line Leader delivers to Group Head with worker reports

8. Quality Control & Grading (A/B/C)

Quality control is the cornerstone of Barindra International's business model. Unlike many competitors, the company prioritizes quality over quantity. A worker producing 100g of best quality earns more than one producing 5kg of poor quality.

QC Process

1. Packet Collection: All packets from a Line Leader's workers are collected and brought to the QC station.

2. Individual Inspection: 4 QC inspectors examine each worker's output individually.

3. Quality Grading: Each packet is graded as A, B, or C based on:

- Length consistency
- Hair strength and texture
- Color uniformity
- Tangle-free quality
- Overall finish

Grading Criteria

Grade A	Best quality - highest salary rate, smooth texture, consistent length, strong
Grade B	Good quality - standard salary rate, minor inconsistencies acceptable
Grade C	Below standard - lower salary rate, significant quality issues

Salary Impact

Worker salary is directly linked to quality grade:

- Grade A workers receive premium daily rate
- Grade B workers receive standard daily rate
- Grade C workers receive reduced daily rate
- Continuous Grade C performance may lead to termination
- Performance bonus calculated based on quality consistency

9. Wastage & Weight Loss Tracking

Weight loss occurs at every stage of processing and must be carefully tracked. Understanding wastage patterns is essential for accurate costing and pricing.

Weight Loss by Stage

Stage	Typical Weight Loss	Example
Raw to Washed	Variable (water, dirt removal)	500 kg → ~480 kg

Stage	Typical Weight Loss	Example
Phase 1 Production	~10-15%	10 kg given → 8.5-9 kg returned
Phase 2 Processing	~10-15%	Further reduction in factory
Final Processing	~5-10%	Final trimming and QC rejection
Total (Raw to Export)	~30-40% overall	500 kg raw → 300-350 kg finished

Tracking Method

- Every material movement is weighed and recorded
- Input weight vs. output weight compared at each stage
- Variance flagged for investigation if outside tolerance
- Supervisor performance evaluated based on wastage rates

10. Phase 2 Production: Factory Processing

After Phase 1 completion, materials return to the Dinajpur factory for the second major processing stage. Approximately 200 workers are employed at the factory for this phase.

Phase 2 Process

1. Material Receipt: Phase 1 output received from Group Heads as individual packets by Line Leader.

2. Consolidation: Packets consolidated by lot number.

3. Second Processing: 200 factory workers perform additional processing steps:

- Further alignment and sorting
- Length-based categorization
- Removal of imperfect strands
- Intermediate quality checks

4. Wastage Recording: Additional weight loss recorded at this stage.

5. Re-packing: Material repacked by quality and size for final processing.

6. Dispatch to Dhaka: Completed Phase 2 material sent back to Dhaka factory.

11. Final Processing & Size Sorting

The final processing stage takes place at the Dhaka factory where approximately 100 workers complete the last processing steps before the products are ready for export.

Final Processing Steps

- 1. Receipt from Dinajpur:** Phase 2 output received at Dhaka.
- 2. Final Quality Control:** Final QC inspection by dedicated Quality Controller.
- 3. Size Sorting:** Hair sorted by length in inches:
 - Sizes range from 5 inches to 30 inches
 - Each size category sorted separately
 - Size availability tracked for order fulfillment
- 4. Final Trimming:** Last trimming and finishing.
- 5. Export Preparation:** Products packaged and labeled for export.

Size Categories

Short	5-10 inches	Lower price range
Medium	12-18 inches	Standard price range
Long	20-24 inches	Premium price range
Extra Long	26-30 inches	Highest price range

12. Export Preparation & Sales

The export process begins when a sales contract is secured. Products are prepared and shipped according to buyer specifications.

Export Process

- 1. Sales Contract:** Export sales contract received from international buyer.
- 2. Order Processing:** Order checked against available inventory by size and quality.
- 3. Product Allocation:** Specific lots allocated to fulfill order.
- 4. Final Inspection:** Export-ready inspection performed.
- 5. Packaging & Labeling:** Products packaged per buyer requirements.

6. Documentation: Export documentation prepared (invoice, packing list, certificate of origin, etc.).

7. Shipment: Goods shipped via sea/air freight to destination.

Export Markets

- China (primary market)
- United States
- European Union
- African markets
- Various other international destinations

13. LC Management & Import Documentation

Letter of Credit management is critical for international procurement. The company handles multiple LCs simultaneously across different countries and banks.

LC Management Process

- 1. LC Opening:** LC opened through commercial bank for supplier.
- 2. Amendments:** Any amendments tracked and documented.
- 3. Shipment Tracking:** Monitor shipment against LC timeline.
- 4. Document Receipt:** Receive and verify documents from negotiating bank.
- 5. Payment Settlement:** LC payment settlement upon document verification.
- 6. LC Closure:** Formal closure after all obligations met.

Key Tracking Requirements

- LC status: Open, Utilized, Closed
- Shipment status per LC
- Document status: Received, Pending, Discrepant
- Bank communication log

14. Worker Attendance & Salary Management

Worker management is one of the most complex aspects of operations. With approximately 5,000 daily workers, the attendance and salary calculation process requires careful tracking and multiple verification steps.

Attendance Tracking

- 1. Daily Attendance:** Each worker's attendance marked daily by their Supervisor.
- 2. Supervisor Report:** Supervisor submits attendance report to Line Leader.
- 3. Line Leader Verification:** Line Leader verifies and consolidates attendance data.
- 4. Data Entry:** Two dedicated staff enter 5,000 workers' daily data.
- 5. Attendance Bonus:** Workers with 30 consecutive days attendance receive bonus.

Salary Calculation

Component	Description
Base Daily Wage	Standard daily rate based on worker category
Quality Multiplier	Grade A = Premium, Grade B = Standard, Grade C = Reduced
Attendance Bonus	Bonus for perfect monthly attendance (30 days)
Performance Bonus	Additional bonus based on supervisor's profit contribution

Bonus Types

- Attendance Bonus: For 30-day perfect attendance
- Performance Bonus: Based on supervisor's profit/loss contribution
- Supervisors generating profit receive production bonus
- Supervisors generating consistent loss may be terminated

15. Performance Tracking & Reporting

Performance tracking is essential for maintaining quality and efficiency. The company tracks performance at multiple levels to identify issues and reward excellence.

Tracking Levels

Level	Metrics Tracked
Individual Worker	Daily output (kg), Quality grade (A/B/C), Attendance
Supervisor	Team output, Team quality average, Worker attendance rate
Line Leader	Total production, Wastage rate, Factory coverage
Group Head	Overall production vs. target, Quality summary

Daily Reporting

- Daily production report by Line Leader
- Daily quality report by QC team
- Daily attendance summary
- Daily wastage analysis

Monthly Reporting

- Monthly production summary
- Monthly salary sheet
- Monthly performance evaluation
- Monthly inventory report

16. Accounts & Finance Process

The accounts and finance function handles all financial transactions, cost tracking, and reporting. Currently managed through Excel with plans for full ERP integration.

Financial Processes

- 1. Purchase Accounting:** Record all raw material purchases with cost breakdown.
- 2. Expense Tracking:** Track factory costs, head office costs, and operational expenses.
- 3. Worker Payments:** Calculate and disburse daily wages and bonuses.
- 4. Sales Recording:** Record export sales and local sales.
- 5. Voucher Creation:** Create vouchers for all financial transactions.
- 6. Reporting:** Generate financial reports and statements.

Key Financial Reports

- Balance Sheet
- Profit & Loss Statement
- Cash Flow Statement
- Inventory Valuation Report
- Cost Analysis by Process Stage

17. Complete Process Flow Summary

The following summarizes the complete end-to-end business process flow from procurement to export:

Step	Process	Location	Output
1	Procurement	Source Countries / Local	Raw Human Hair
2	Receiving	Dhaka Warehouse	Raw Material Inventory
3	Sorting & Grading	Dhaka	Color-sorted, Quality-graded Lots
4	Lot Assignment	Dhaka	Tracked Lots with Lot Numbers
5	Transfer to Factory	Dhaka to Dinajpur	Material at Factory
6	Washing	Dinajpur Factory	Cleaned Material
7	Phase 1 Production	Home-based (5,000 workers)	Processed Packets
8	Quality Control	Dinajpur	Graded Packets (A/B/C)
9	Phase 2 Processing	Dinajpur Factory (200 workers)	Semi-finished Product
10	Return to Dhaka	Dinajpur to Dhaka	Material for Final Processing
11	Final Processing	Dhaka Factory (100 workers)	Size-sorted Final Product
12	Export Preparation	Dhaka	Export-ready Products
13	Sales & Export	International	Revenue

This document provides a comprehensive overview of all business processes at Barindra International. Each process area represents a critical function that must be carefully managed to

ensure operational efficiency, quality control, and profitability. The proposed ERP system will automate and integrate these processes to improve tracking, reduce manual work, and provide real-time visibility into all operations.
